What is a Care Navigator?

A **CareThrough Care Navigator** is a revolutionary concept in modern medicine. Traditionally, physicians have focused on patient care when the patient is in front of them in an office, Emergency Department or Hospital, but today's healthcare industry requires providers to support patients and their health when they are outside of these care settings as well.

Care Navigators work with medical care teams and patients to understand underlying social and lifestyle factors in patient's health, provide support towards positive change and aim to make the care team more efficient in their care through better understanding of a patient's situation.
